

Barrels (\$BARRELS)

From Solana Community to MiCA-Compliant Oil Token

Executive Summary

Barrels (\$BARRELS) is the first step toward a regulated oil-backed token in Europe. Launched initially on Solana for speed and community growth, Barrels will migrate to Ethereum where it will become an Asset-Referenced Token (ART) under Europe's MiCA regulation. Backed by BarrelProof Labs, the first European infrastructure for Proof-of-Reserves, Barrels connects real-world commodities like oil, gold and metals to the blockchain with full transparency and compliance.

Why Oil?

- Oil = core of the global economy.
- Traditionally limited to large funds and institutions.
- Barrels democratizes access to oil in a safe, verifiable way.

MiCA Compliance

MiCA (Markets in Crypto-Assets Regulation) requires:

- Regulatory whitepaper.
- Proof of segregated reserves.
- Investor protection and transparency.

Barrels is built for compliance from day one, unlike most speculative projects.

Roadmap

1. Phase 1 (Now) – Community launch on Solana.
2. Phase 2 (2025) – Migration to Ethereum for institutional scale.
3. Phase 3 (2026) – MiCA-compliant oil-backed token.
4. Phase 4 (Future) – Expansion to other commodities (gold, silver, energy).

Token Information

- Name: Barrels
- Symbol: \$BARRELS
- Decimals: 9
- Chain: Solana (Phase 1), Ethereum (Phase 2)
- Contract Address: PUT_YOUR_CA_HERE

Slogan

Real assets. Real compliance. Real transparency.
